

STEP 1. Challenges

1.	If after five years, Guyana does not meet the MATCH program's requirements, causing Axor to cease investment in Guyana's mining industry, then many mining sites could shut down, possibly causing unemployment rates to escalate in 2050 and beyond.
2.	Since Axor is going to invest in Guyana's mining industry then a problem might be that Guyana may choose to spend the money on something not agreed on by both parties in 2050 and beyond.
3.	If Guyana feels that they are being looked down upon for being indebted then a problem might be that Guyana may be reluctant to accept help from Axor in 2050 and beyond.
4.	Because Guyana and Axor are counting on the aluminum market to make their partnership successful then a problem might be that the market for aluminum may plummet in 2050 and beyond.
5.	Since a period of five years is allowed in improving the condition of Guyana, a problem might be that the economical growth may not reach its pinnacle, which may result in a drop of the program as Guyana returns to its original status in 2050 and beyond.
6.	Due to the fact that the two MATG participants have no prior connections, then a problem might be that a lack of understanding could arise causing Axor to overlook the impending needs of the country in 2050 and beyond.
7.	If Axor continues to focus on the growth of Guyana's mining industry, a challenge might be that the everyday needs of Guyana's population could suffer due to the lack of attention being provided in 2050 and beyond.
8.	If the MATCH program is not able to assist Guyana efficiency of economy, a problem might be other debt countries may have been suited for this program but may not have been able to receive treatment that could have assisted this "debt stricken" country in 2050 and beyond.
9.	Since Guyana is under a new democracy, a problem might be that the barely stable Guyana may not be prepared to intelligently budget their growing economy. This may cause more economic unrest in Guyana in 2050 and beyond.
10.	If the bauxite mines prove to be a minor resource in Guyana, a problem might be that the main focus of MATCG Guyana economy may be a fall-through plan. This may cause Guyana to remain in a state of debt in 2050 and beyond.
11.	Since Guyana has prior history with civil unrest, a problem might be that this unrest may re-arise which could cause a decline in the economy despite the efforts of Axor in 2050 and beyond.
12.	If a bordering country of Guyana once again attempts to conquer borderlines of Guyana, a problem might be that Guyana may have to spend money on war expenses. This may cause more debt in this developing country in 2050 and beyond.
13.	Because Axor is focusing on Guyana's minor industry, mining, then a problem might be that their economy might not meet as high requirements than if they focused on a major industry in 2050 and beyond.
14.	If Axor's finances decrease, causing them to become in debt, then a problem might be Guyana might lose their economic support in 2050 and beyond.
15.	Since Axor is financially supporting Guyana, then a problem might be that Axor might take advantage of their power over them, becoming controlling in 2050 and beyond.
16.	Since most new employment in Guyana would be placed in the mining industry, then a problem might be that those who work in the mines because there aren't any other jobs, might be at risk to various health issues in 2050 and beyond.

STEP 2. Underlying Problem

Since the developing country of Guyana is under a new democracy, how might we increase their budgeting efficiency, so that their economy remains stable in 2050 and beyond.

STEP 3. Solution Ideas

1.	In order to increase Guyana's chances of being successful with the MATCH program, the MATCH program will provide Guyana with an artificially intelligent budgeting assistant that will be distributed throughout the government. These assistants are programmed with the latest budgeting skills and will be funded by IBA.
2.	The makers of TurboTax have expanded into the home business and country budgeting market. You can now set the budget for an entire country to inserting the microdisk into your microsphere pc and following the simple directions, creating a budget plan any government leader could use to establish a stable economy.
3.	In order to help the leaders of Guyana budget effectively, the IBA has funded cause-and-effect contacts. Any time the politician is faced with a budgeting problem the contacts display has much money Guyana currently has, how in debt they are, and how their decision will affect the country. This information will assist the politician in making an educated decision.
4.	"heads or Tails" a coin based budget decision making product has been gifted to the politicians of Guyana. In order to use these coins you simply input all the data about your country's financial status into the supplied program and ask if a yes or no financial budgeting question. Then you toss the coin and it will tell you either yes or no.
5.	In 2050 the United States will sign a treaty with Guyana stating that all eligible candidates will be required to pass a budgeting/finance virtual scenario with a qualifying score, this will ensure more knowledge in keeping a stable economy, with Guyana's political applicants.
6.	The Mcmillan text book company will market an audio history of all prior world leaders, which will surgically enhance the new democratic leaders knowledge of how past leaders have continued to stabilize their territory in 2050 Guyana and beyond.
7.	The leaders of Guyana will use a Calcer, an artificially enhanced calculator that can be used to budget their funds. Once all numbers are programmed into the Calcer, it will decide how to divide the funds. The Calcer decisions are 99.9% accurate and will help the Guyana economy to remain stable.
8.	A line of fashionable pins will be created of which all financial leaders of Guyana must wear. When they are making a bad decision about how to use funds, it will turn a vivid red. However, if they make a correct decision it will turn a pleasing shade of green.
9.	A company funded by the MATCH program upon realizing their problem of Guyana's economy, called "In the ear" will create a type help line. This company will create ships to insert into politicians. Whenever a budget problem arises, these specialists use past experiences and FPS skills to create economic stability in Guyana in 2050 and beyond.
10.	Parliament of Guyana will pass a law called "The Law". This law will state that 25% of all profits due to economy must be set aside in a storage center. When the economy becomes unstable, this set aside money will be used to recover stability in 2050 and beyond.
11.	From the Warner Brothers studio's arising the greatest information video of all time. This video named "The Cash" teaches the new and upcoming politicians of Guyana how to work a stable economy. With trained leaders, Guyana will become economically stable in 2050 and beyond.
12.	In order to increase the stability of the economy the government of Guyana will be given a choice of a few budgeting officials from more affluent countries who are trying to help other countries through match program. This person will remain with the country for the duration of this match and in addition to budgeting will train others to do this.
13.	"Bank It" will create a large piggy bank with artificial intelligence that will be given to Guyana so they can correctly budget their funds. This bank will look at all aspects of ways to use the country's finances and will divide the funds accordingly in 2050 and beyond.

14.	A new fedora hat will be created by Finnder that will have small electrodes in them. When the fedora is placed on the head the electrodes send signals to the left side of the brain, which controls logic and reasoning, so they can correctly budget the country's funds.
15.	A band called "My Reasonable Funding" will create hit songs that financial leaders of Guyana will listen to. The key changes in the music will send signals to the brain that help them to sort out where their funds should go and how they should be used. This is all thanks to the intelligence of top ranking businessmen in 2050 and beyond.
16.	Van Fee, a world renowned artist, will create a series of paintings that have an assortment of colors, arranged in a way that they send special signals to the brain. When a financialist looks at one, they help them to reason where to use Guyana's funds. Paintings come in a wide variety with special paint to maintain economy in 2050 and beyond.

STEP 4. Criteria

1.	Which solution will use the least amount of funds in order to maintain economic stability throughout the debt stricken, developing country of Guyana in 2050 and beyond.
2.	Which solution will utilize a limited amount supplies so that the developing country of Guyana will remain with an economic stability while staying out of debt in 2050 and beyond.
3.	Which solution will be implemented with the greatest speed in order to sustain economic stability in Guyana in 2050 and beyond.
4.	Which solution will have the least chance of danger while obtaining economic stability in the debt stricken Guyana which is becoming a developing country in 2050 and beyond.
5.	Which solution will have the greatest approval rating by the developing country of Guyana so that economic stability is reached in this debt country in 2050 and beyond.

STEP 5. Apply Criteria

Step 3 Sol'n #	Solution Idea	Criteria					Total
		1	2	3	4	5	
#9	In the Ear	1	4	8	6	4	23
#13	Bank It	4	5	2	5	5	21
#14	Fedora	6	2	5	1	6	20
#1	Intelligent Robot	3	6	3	1	7	26
#2	Turbo Tax	7	3	4	2	1	17
#5	Budgeting/Finance Scenario	5	8	6	8	8	35
#6	Audio History	8	1	1	3	2	15
#10	The Law	2	7	7	4	3	23

STEP 6. Action Plan

*Warning. Please read the following before commencing to the Scenario

The following virtual scenario brought to you by the United States government, ensures the users safety when using this product. This virtual scenario you are about to witness, tests the skills of your budgeting/finance knowledge. By playing out the surreal situations, the user will score points on how they handle an unstable government. With the goggles you are about to install upon your face, you can and will be in a very life like test environment. This product solved the budgeting issue in Guyana and will hopefully continue stabilizing their country starting with you.

This virtual scenario was a product funded by the IBM in hopes of curing future budgeting problems. These goggles can be rented from any major governmental housing facility around Guyana for serious political applicants only. The United States Government as well as neighboring countries of Venezuela and Surinam approve of this message and the usage of this product.

Any future complications or obstacles, in example another poverty stricken country or business trying to destroy the stabilizing Guyana through this program, these will be handled by our funders and supporters around the world as a major concern, but we do not anticipate the occurrence of these dilemmas.

Seeing that you have read the proper warning label of this product, the hopeful country of Guyana wishes you good luck and a high score! We look forward to seeing you at future political gatherings. Please proceed in placing the goggles on your head and starting your virtual scenario!
